Subject: Portland Harbor surface water and TZW PRG table for review
Water PRGs 10.25.12.xlsx

Hi Burt,

Attached is the surface water and TZW PRG development table for your review. You will see a total of four tables. The two backup files identify the COCs (HQ>1) for each medium based on the information provided in the Burt/Tony table. From those tables, the COCs were listed on the associated PRG table. Within each PRG table I have provided the range of values followed by the ones selected for use as water TRVs in the BERA as of April 2008. You will see a series of notes/questions for you in red at the bottom of each PRG table (possibly leading to additions) and a couple of notes in blue off to the right for your review. Please review this file and let me know if we need to make any revisions prior to distributing to the group and finalization of water PRGs. I will next work on setting up a similar table for sediment PRGs while awaiting outcome of calculations discussed in Portland.

Thanks,
Jenn
